

ABOUT US

Chillington Rwanda is the sole manufacturer of casted spares in Rwanda. Established in 1982 as an agricultural hand tool company, we have now diversified into steel and iron castings.

We have a production capacity of 4 tonnes per day and a well-equipped machine shop to serve virtually all your needs in spares.

Established in Kigali, Rwanda, we are ideally located to provide you quality spare parts with superior customer service at the right price.

THE PROCESS

STEP 1. Drawing
Taking dimensions, making technical drawings in order to give the corresponding quotation.

STEP 2. Pattern Shop
Making a model of the part in wood to imprint into the sand mould.

STEP 3. Mould Shop
Making the sand mould with the pattern in step 2 and a special sand mixture.

STEP 4. Melting Shop
Scrap steel is melted up to 1640° C and given the required chemical composition by adding alloying elements.

STEP 5. Heat Treatment
The part is heat treated to obtain the required hardness level.

STEP 6. Quality Control
We check the dimensions, chemical composition, and hardness to ensure quality.
